

Allen 30mm Double Articulating Block with Fixed Eye

30mm Double Articulating Block with Fixed Eye.

This double articulating block is very similar to the standard double except the central rivet and spacing mouldings have been removed. Each block can articulate to the correct lead angle allowing the rope to run more centrally around the sheaves. The result is a reduction in friction as well as making the block last longer due to less wear on the cheeks.

- Blocks articulate individually
- Allows better alignment to rope
- Line friendly soft contours and articulation,
- Stainless steel cheeks and inner bearing system handles maximum loads
- Central hole for tie-on becket
- Available with double or triple sheaves
